

Sinaqua Waterless Magma 3.0. Urinal Cartridge

The revolutionary Sinaqua Waterless Magma 3.0. cartridge is the heart of every Ø 110 mm hole opening waterfree urinal. The Sinaqua Waterless Magma 3.0. sets a new standard for performance. The patent-pending valve inside the cartridge uses a highly engineered combination of ridged and elastomeric materials that allows urine to freely flow through then provides a positive seal for odor-free operation, even in plumbing systems with vacuum or oscillating pressure. In addition, the use of a sealing liquid is possible. Which generates this cartridge to a cartridge with a tripple barrier system. This is a significant improvement over soft rubber valves that are found in other brands of waterfree urinals, which can fail to close and allow odor and gas to seep into lavatories.

A filter within the Sinaqua Waterless Magma 3.0. cartridge prevents debris from entering the drain pipes, debris that may otherwise clog pipes within the building walls. The cartridge is not affected by bucket dumps or spray cleaning solutions at all.

The Sinaqua Waterless Magma 3.0 cartridge design is the result of extensive research and development initiatives, which have produced the most advanced technology available for waterfree urinal systems.

Features/Benefits

- Patent-pending valve provides positive closure for consistent and dependable operation, even in installations with vacuum or oscillating pressure.
- Internal filter prevents debris from entering drain pipes, reducing clogs.
- O-ring and patented bayonet tabs lock the cartridge into the urinal housing with an airtight, tamperresistant seal.
- Sealed cartridge design allows replacement in less than one minute.
- Requires no liquid sealant but it is possible to use sealant as a additional method.
- Eliminates 100% of urinal water usage and flush valve maintenance.
- Constructed with recyclable ABS plastic.
- Fully compatible with all Ø 110 mm hole opening waterfree urinals

The Sinaqua Waterless Magma 3.0. cartridge can be changed in less than one minute and is 100% compatible with all all Ø 110 mm hole opening waterfree urinals, worldwide.

Valve Opens During Use

Engineered patent-pending valve uses a combination of ridged and elastomeric materials to allow urine to freely pass through. Internal filter captures debris within the cartridge and prevents it from entering the building's drain pipes, reducing clogs.

Airtight Seal

After urine passes through, the valve provides positive closure for odor-free operation even in installations with vacuum or oscillating pressure. O-ring and patented bayonet tabs lock the cartridge into the housing with an airtight, tamper-resistant seal.

SinaquaWaterless Magma 3.0.CartridgeSpecifications

- 100% compatible with all with all all Ø 110 mm urinals, worldwide
- Recyclable ABS
- Nominal dimensions are 18 x 10 cm [4.625 x 3.875 inches]
- Approximate weight is 170 grams [6 ounces]
- Packaged shipping weight is 340 grams [12 ounces]

Includes

- Sealed cartridge
- Installation key
- Plastic gloves
- Disposal bag
- Instruction sheet
